## 1.10 CONSTRUCTION & BUILDINGS

The client provided us with a construction permit to the subject property with a total BUA of 48,770.66 Sqm distributed on 3 underground floors and 2 upper floors. The building permit indicates the maximum permissible BUA approved by the city municipality. However, the actual area may differ from the area mentioned in the building permit. Therefore, if the customer does not provide us with a copy of the approved plans, the evaluation will be done based on the building permit provided by the customer. In the event that the customer does not provide us with a copy of the legal documents that show the total building surfaces, we will evaluate them using the skills of our team along with the municipality's laws and regulations, and therefore the building surfaces will be estimated only roughly.

# PROPERTY VALUATION

---

**1.17 GENERAL ASSUMPTIONS**

- The subject property is valued under the assumption of freehold status unless otherwise stated in the report.
- All the written and verbal information provided to us by the Client assumed to be up to date, complete and correct in relation to elements such as title deed, construction permits, land area, and any other relevant matters that are set out in the report.
- This report is a valuation report and not structural / building survey. Therefore, we did not carry out any structural due diligence, utilities check, services check, soil test, etc.
- All the inputs used in the valuation methodologies are based on the collected market data using our best know how and experience in the related market.
- The output of this report (Final Value), is based on the used assumptions, received documents from the client and available market data. Yet, the output estimates show an indicative value of the subject property / properties.

**1.18 VALUATION APPROACH**

With reference to the valuation purpose, taking into consideration the nature of the subject property, we will use the following ticked methods to estimate the market value of the subject property:

	DRC	Comparable	Income Cap	DCF	RLV
Land	-----	✓	-----	-----	-----
Building	✓	-----	-----	-----	-----
Overall Property	-----	-----	-----	-----	-----

**COMPARABLE METHOD**

This is the method most are familiar with as it is the accepted method for valuing residential real estate. Typically, this method involves selecting properties with similar characteristics in the same market area that have recently sold. Once those properties are found they are compared to the property in question and a professional appraiser will deduct value from the subject property for comparative deficiencies and increase value for advantages. Typically, this method is required if the investor is seeking conventional financing. For comparable information, property brokers, dealers and estate agents are contacted to ascertain the asking and selling prices for property of the nature in the immediate neighborhood and adjoining areas. Neighboring properties, which have been recently sold or purchased, are investigated to ascertain a reasonable selling price.

## DEPRECIATED REPLACEMENT COST (DRC)

A cost approach is a real estate valuation method that surmises that the price someone should pay for a piece of property should not exceed what someone would have to pay to build an equivalent building. In cost approach pricing, the market price for the property is equivalent to the cost of land plus cost of construction, less depreciation. It is often most accurate for market value when the property is new. Generally, the cost approach considers what the land, devoid of any structures, would cost, then adds the cost of building the structures, then depreciation is subtracted. The cost approach is most often used for public buildings, such as schools and churches, because it is difficult to find recently sold comparable properties in the local market, and public buildings do not earn income, so the income approach cannot be used, either. A property that already has improvements will usually contribute a certain amount of value to the site, but improvements can also lower property value if the site's potential buyers wish to use the property for another use that would entail removing some of the improvements to the current site. The cost approach is best used when improvements are new and there is adequate pricing information to value the property components. The cost approach may be less desirable if there are no recent sales of vacant land for which to compare, since the major method of valuing vacant lands is to use the sales comparison approach, or when construction costs are not readily available. The cost approach method includes:

- Estimate what the vacant property would be worth.
- Estimate the current cost of building the structures, then add that value to the value of the vacant land.
- Estimate the amount of accrued depreciation of the subject property, then subtract it from the total to arrive at the property's worth.

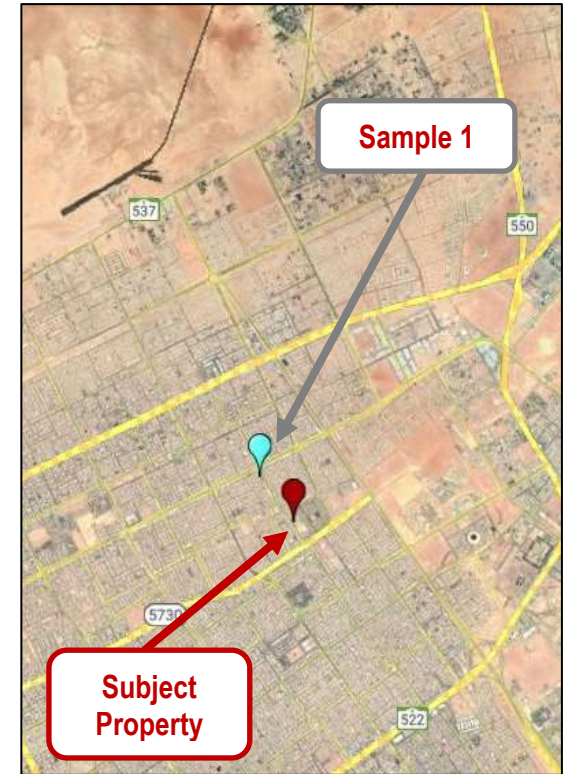

### 1.19 COMPARABLE APPROACH

This method aims to collect data and information on actual sales or current offers of real estate similar to the original subject matter being evaluated, and then make the necessary adjustments to these comparisons in terms of area, location, shape, quality, content and others. Below is a summary of the evaluation process in the style of comparisons and the amendments made to the available comparisons

			<b>PROPERTY VALUE</b>		

Based on the market samples obtained with the assistance of some real estate experts in the region and the inspection made by our team, the average prices for similar properties falls in the range of 2,500 - 3,000 SAR / Sqm with an average of 2,750 SAR / Sqm. When comparing with the results of the analysis of comparisons, we found that the property value falls within the same range and is close to the market average values.

## 1.20 COST APPROACH (DRC)

As a first step, the cost of reconstructing the building (the cost of replacement) was estimated, based on the average construction costs of the real estate similar to the property being evaluated, and at the same level of finishes, services, utilities, and others. The opinion of some engineering experts was used in this regard, and in the following table the scope of the expected costs for replacing the building under evaluation.

	Min Cost (SAR / Sqm)	Max Cost (SAR / Sqm)	Average Cost
<b>Skeleton - Concrete Cost</b>	SAR 1,100	SAR 1,200	SAR 1,150
<b>MEP</b>	SAR 350	SAR 450	SAR 400
<b>Finishing Materials</b>	SAR 650	SAR 750	SAR 700
<b>Site Improvements</b>	SAR 80	SAR 120	SAR 100
<b>Owner Profit</b>	18%	22%	20%

In the following table, we will calculate an estimate of the direct costs of the building in the new condition, according to the main components of the building, such as the concrete structure, electromechanical work, finishes, site improvements, etc. Then we will estimate the value of the indirect costs as a percentage of the total direct costs to estimate the total construction costs of the project

After knowing the total building construction costs at a rate of 1,055 SAR per square meter, we will estimate the life span of the property according to the type of construction and its general condition, and then apply the depreciation rates based on the actual age of the property. Then, the developer's profitability will be added to the property's value after depreciation to see the estimated market value of the building

DEVELOPMENT VALUE			
<b>Total Dev Cost</b>	<b>SAR 39,501,312</b>	<b>Net Dep Rate</b>	<b>0.00%</b>

<b>Add Appr Rate</b>	<b>0.00%</b>	<b>Development Value</b>	<b>SAR 42,266,403</b>
<b>Net Dep Rate</b>	<b>0.00%</b>		

The total market value of the building is 42,266,403 SAR, which will be added to the market value of the land in order to get the full value of the property as follows:

Total Dev. Value	Land Value	Total Property Value	Rounded Value
SAR 42,266,403	SAR 30,051,000	SAR 72,317,403	SAR 72,320,000

The client informed us that there are no changes in the completion rates of the project since December 2020.

## 1.21 LEASING CONTRACT

The client provided us with a leasing contract with the below details:

1<sup>st</sup> Party: شركة المقصد العقارية

2<sup>nd</sup> Party: شركة كليات الرؤية للتعليم

Duration: 25 Years

Starting Date: 2021

Ending Date: 2045

As per the leasing contract, there are promissory notes for the contracts full period.

## 1.22 SUBJECT PROPERTY VALUE IN DIFFERENT APPROACHES

Methodology	Subject of Valuation	Value in Numbers	Value in Letters
Comparable Approach	Land	SAR 28,350,000	Twenty-Eight Million and Three Hundred Fifty Thousand Saudi Riyals
DRC Approach	Land + Building	SAR 72,320,000	Seventy-Two Million and Three Hundred Twenty Thousand Saudi Riyals

It is true that the subject property considered as a special property (educational facility), but since the subject property is being leased on a long-term bases with the availability of the promissory notes (provided by the tenant) and taking into consideration the purpose of valuation, we will indicate the final value of the subject property based on the Cost Approach.

## 1.23 SUBJECT PROPERTY VALUE

We are of an opinion that the total market value of the subject property taking into consideration the purpose of valuation by using the DRC Approach is:

**Property Value: 72,320,000 SAR**

**Seventy-Two Million and Three Hundred Twenty Thousand Saudi Riyals**

## 1.24 VALUATION NOTES

We did not apply the income approach while valuating the subject property for the following 2 reasons:

- The subject property considered as a special property due to its nature of use, where no active market transactions for such property types. Therefore, we have applied the DRC approach.
- The subject property still in the construction phase and expected to be finished in 2 years' time.
